Tue, Apr 5, 2022 at 2:26 PM

Good afternoon Karen,

Below is from my Fire Captain David Orr who is our EMS Captain:

California City Fire Department Paramedics recently completed a comprehensive ultrasound training course by taught by Emergency Room Physicians from the Arrowhead Regional Medical Center (ARMC). The Butterfly iQ Ultrasound devices have been deployed in the field for approximately 2 months. The Butterfly iQ Ultrasound is handheld and utilizes a smartphone or tablet to show ultrasound images, including different ultrasound operating modes, and state-of-the-art "Needle Viz" technology that provides enhanced needle insertion capabilities. Point of Care Ultrasound (POCUS), will be an invaluable tool for our Paramedics to add to their toolbox. Ultrasound imaging will be used to identify possible internal bleeding, pneumothorax (collapsed lung), assist in difficult intravenous cannulation, and help drive decision making in resuscitation / cardiac standstill events. For critical patients, the ability to identify potential life threats with ultrasound imaging in the field can quite literally save lives. Identifying these life threats can reduce the amount of time it takes for a patient to receive lifesaving medical treatment modalities and definitive care. The California City Fire Department teamed up with the Eastern Kern Health Care District, Kern County Emergency Medical Services, the California State Emergency Medical Service, and the Arrowhead Regional Medical Center to bring ultrasound technology to the citizens of California City as a trail study, providing ultrasound imagery in the prehospital setting. All this was made possible from a generous grant donation provided by the East Kern Health Care District who donated Four Butterfly iQ Ultrasound devices to the department. Fire Captain David Orr who also our EMS Captain, is overseeing the deployment of the ultrasounds in the field. Captain Orr has already witnessed how the units provided paramedics the ability to make rapid and definitive patient care decisions. According to emergency room physicians, the Butterfly IQ has the same capabilities as the large emergency room ultrasound units which must be moved on wheeled carts.

As Fire Chief, it is exciting to see what was once a huge piece of machinery, can now be easily carried as a pocket sized device. This greatly increases our service to the community and will it help decrease the loss of life due to the things that were hidden from us before having field ultrasounds. This study is one of many stepping stones that will help pave the path to Community Paramedicine which help to decrease emergency room crowding and give our citizens better overall healthcare. One of the units has been assigned to our wildland firefighting division which will be used by CCFD line paramedic deployments during large statewide wildland fires. Often our wildland firefighters work in remote areas far from hospitals and our ability to support them during these highly dangerous incidents will be highly beneficial. It's a very exciting time.

If you would like it written differently please let me know. I hope this helps!

Thank you again to you and the Board for this awesome opportunity and gift to the community.

Sincerely,

Jeremy Kosick
